

Driving Safely.

On-Line Driver Training and Risk Management software.

Statistically, driving is the most dangerous activity you and your staff are likely to undertake on a regular basis and, driving on business, greatly increases that risk.

A staggering 65% of vehicles used for work purposes will be involved in some sort of accident in a 'typical' year.

The new Corporate Manslaughter and Corporate Homicide Act, introduced in April 2008, is the most significant change to Health and Safety Law since 1974. It makes it easier to prosecute any organization that has neglected its duty of care to its employees.

'Corporate' responsibility makes it more important than ever to do all that you can to ensure the safety of your employees who drive for work purposes, whether in a vehicle supplied by the employer or their own vehicle.

It is essential to educate staff and our *Driving Safely* Training will enable you to mitigate risk and at the same time increase efficiency and improve performance.

Driving Safely means that you will have:

- Paper free, electronic records of all driver training and results from that training.
- A risk profile of every driver
- An audit trail of risks and remedial action taken
- The ability to demonstrate that you have taken your *duty of care* seriously and been proactive in raising standards of driving and safety
- Finally, but very importantly *Driving Safely* training soon becomes self funding through reductions in fuel, maintenance and insurance costs and vehicle wear and tear. It means better re-sale value and of course lessens your impact on the environment.

We would really like to demonstrate the full capabilities of *Driving Safely*.
